PWG WIMS _CIM Alignment_
Conference Call Minutes
May 10, 2005

Craig Whittle – PWG WIMS/CIM Co-chair

Meeting was called to order at approximately 1 p.m. EDT May 10, 2006 by Pete Zehler.

Attendees

Ira McDonald	High North
Pete Zehler	Xerox
Craig Whittle	Sharp
Jerry Thrasher	Lexmark

General Discussion

- Subunit definition changed per Ira's recommendation

    o WIMS subunits schema has datatypes that has been incorporated into SM

- Top-level services added (including new PrintServices instead of "printer")

    o CopyServiceStatus is a subclass of the complex type of ServiceStatus.

- ServiceId is opaque with a scope local to device domain (local references).

- ID refs only done in attributes not elements. No ID attributes exists that provide a unique integer reference. Do we need to add a new attribute?

- ID refs must be single-valued. How do we define multi-valued URI references used in IPP for ServiceURISupported?

- SMv2 supports queues in ServiceJobReferences.

- Ira suggested we create a new class for job for a generic job. Where does it belong?

- HP has expressed interest in contributed to SMv2 including jobs. How should jobs be contained? At what level? What impact does it have on a job orchestrator?

- How do subunits relate to Devices? More than one subunit needed to instantiated in other classes that refer to them.

Next Steps / Open Actions:

- Next meeting scheduled for May 31st which will focus imaging jobs. Complex jobs will be deferred for the future.
