- TL;DR: Anything you say in a PWG meeting or email to a PWG address can be used in a PWG standard
  - (but please do read the IP policy above if you haven't done so)

# PWG Patent Statement

PWG standards may include the known use of essential patents and patent applications provided the PWG Chair receives assurance from the patent holder or applicant with respect to patents whose infringement is, or in the case of patent applications, potential future infringement the applicant asserts will be, unavoidable in a compliant implementation of either mandatory or optional portions of the standard. This assurance shall be provided without coercion.

# PWG Patent Statement

This assurance shall be either:

- A general disclaimer to the effect that the patentee will not enforce any of its present or future patent(s) whose use would be required to implement either mandatory or optional portions of the proposed PWG standard against any person or entity complying with the standard; or
- A statement that a license for such implementation will be made available without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination.

# PWG Patent Statement

The PWG is not in a position to give authoritative or comprehensive information about evidence, validity or scope of patents or similar rights, but it is desirable that any available information should be disclosed. Therefore, all PWG members shall, from the outset, draw PWG's attention to any relevant patents either their own or of other organizations including their Affiliates that are known to the PWG members or any of their Affiliates, although PWG is unable to verify the validity of any such information.

# Inappropriate Topics for PWG Working Group Meetings

## Do Not Discuss:

- The validity/essentiality of patents/patent claims
- The cost of specific patent use
- Licensing terms or conditions
- Product pricing, territorial restrictions, or market share
- Don't discuss ongoing litigation or threatened litigation

**DO raise an objection** if inappropriate topics are discussed

# In Memoriam – Peter Zehler (Xerox)

# PWG Design Principles Whitepaper

- Purpose:
  - A document that describes the PWG's core tenets and design principles that guide the design and creation of its IPP, Semantic Model, MIBs, and other technologies
- Scope / Topics to be Covered:
  - IPP
    - Late binding principle
    - Intent vs. process for Job fidelity
    - Value of separating Job attributes from Document content
    - IPP attribute types and design patterns
      - Printer Status vs. Printer Description
      - xxx / xxx-supported / xxx-default vs. xxx / xxx-configured / xxx-supported
      - Collections vs. textual encoding of MIB sequences ("printer-finisher")
  - Semantic Model
    - Creates comprehensible view of the elements in an Imaging System, allowing better communication with other standards organizations dealing with related matters.
    - Presents the basic features necessary in communicating with imaging services, independent of the protocols used in that communication
    - Allows exploitation of the inherent parallelism between different types of imaging services (Print, Scan, Fax, etc.)

- Original notion: Update existing Process 3.0 to merge in subsequently published PWG process documents
  - [pwg-policy-call-for-obj-last-call-formal-vote-draft-2.txt](#) (draft)
  - [ipp-registry-policy.txt](#)
  - [pwg-billing-policy-20141001.txt](#)
  - [pwg-white-policy-20140505.txt](#)
  - [pwg-charter-policy-20140407.txt](#)
  - [pwg-prototype-policy-20121029.txt](#)
  - [pwg-namespace-policy-20160820.txt](#) (new updated draft)
- Revised notion: Refactor the Process document to describe the processes of the PWG to make them simple and obvious to the uninitiated reader:
  - Proposing new work to the PWG
  - Approving new work and assigning to a PWG work group
  - PWG approval for various document types
    - whitepaper
    - standard
    - etc.
