Use Case BOF

May 24, 2011

Webster, NY

Introduction

- The purpose of this BOF is to define common use cases and design requirements that apply to multiple PWG working groups

- We have several use cases that have already been submitted

- Some use cases have already been reviewed once by the Cloud Imaging WG during normal WG conference calls

- As a result of the discussions in the WG conference calls, we are developing a shared Best Practices document that collects all of the common use cases in one place

Use Case Format

- Each use case is fully-defined with a series of subsections inspired by Microsoft's tabular format

- The "Terminology" section at the beginning of the document contains definitions of common terminology for all use cases

- The "References" section at the end of the document contains references for all use cases

- Ultimately each work group will be able to copy use cases and supporting text from this best practices document into the corresponding standards-track documents

PWG Common Use Cases

- Initial draft:
  - ftp://ftp.pwg.org/pub/pwg/general/wd/wd-commonusecases10-20110524.pdf
- Abstract:
  - This Best Practices document provides a repository of well-defined use cases, design requirements, internationalization considerations, security considerations, and references for use for PWG standards-track documents.

Next Steps

- Do we want to do another Use Case BOF?
- Which working group owns the document?
- Other document editors?
- When do we publish?
  - Ideally we should finish up the printing portion of the use cases before the end of the year
- How do we publish?
  - PWG Process for Best Practices requires PWG Last Call and Formal Vote
